## **Engineering Catastrophes: Causes and Effects of Major Accidents** J. F. Lancaster

There is much to be gained from the study of catastrophes. Likewise the records of accidents in industry and transport are of great importance, not only by indicating trends in the incidence of loss or casualties, but also as a measure of human behaviour. The third edition of this well received book places emphasis on the human factor, with the first two chapters providing a method of analysing the records of accident and all-cause mortality rates to show their relationship with levels of economic development and growth rates, and to make suggestions as to the way in which such processes may be linked.

Case histories are given throughout the book. These are designed to show how human frailty, or the unexpected weakness of materials, or a combination of both, can lead to dire and tragic circumstances.

- Understand why disasters occur and how they could have been avoided
- Emphasis is placed on the human factor in catastrophes
- Case studies illustrate the factors that can lead to dire and tragic circumstances
