Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications

Alain Vande Wouwer, Philippe Saucez, Carlos Vilas Fernández

Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications Alain Vande Wouwer, Philippe Saucez, Carlos Vilas Fernández

Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB shows the reader how to exploit a fuller array of numerical methods for the analysis of complex scientific and engineering systems than is conventionally employed. The book is dedicated to numerical simulation of distributed parameter systems described by mixed systems of algebraic equations, ordinary differential equations (ODEs) and partial differential equations (PDEs). Special attention is paid to the numerical method of lines (MOL), a popular approach to the solution of time-dependent PDEs, which proceeds in two basic steps: spatial discretization and time integration.

Besides conventional finite-difference and element techniques, more advanced spatial-approximation methods are examined in some detail, including nonoscillatory schemes and adaptive-grid approaches. A MOL toolbox has been developed within MATLAB®/OCTAVE/SCILAB. In addition to a set of spatial approximations and time integrators, this toolbox includes a collection of application examples, in specific areas, which can serve as templates for developing new programs.

Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB provides a practical introduction to some advanced computational techniques for dynamic system simulation, supported by many worked examples in the text, and a collection of codes available for download from the book's page at www.springer.com. This text is suitable for self-study by practicing scientists and engineers and as a final-year undergraduate course or at the graduate level.

From reader reviews:

Mary McKay:

What do you with regards to book? It is not important to you? Or just adding material when you need something to explain what the ones you have problem? How about your time? Or are you busy particular person? If you don't have spare time to perform others business, it is gives you the sense of being bored faster. And you have free time? What did you do? Every individual has many questions above. They must answer that question due to the fact just their can do in which. It said that about e-book. Book is familiar on every person. Yes, it is appropriate. Because start from on kindergarten until university need that Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications to read.

Frank Monroe:

Now a day those who Living in the era just where everything reachable by interact with the internet and the resources in it can be true or not need people to be aware of each information they get. How people have to be smart in getting any information nowadays? Of course the answer then is reading a book. Reading through a book can help persons out of this uncertainty Information especially this Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications book because book offers you rich information and knowledge. Of course the data in this book hundred percent guarantees there is no doubt in it you know.

Paul Moore:

Many people spending their moment by playing outside using friends, fun activity together with family or just watching TV 24 hours a day. You can have new activity to enjoy your whole day by looking at a book. Ugh, ya think reading a book can actually hard because you have to accept the book everywhere? It ok you can have the e-book, having everywhere you want in your Smartphone. Like Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications which is getting the e-book version. So , try out this book? Let's see.

Selma Lang:

As a pupil exactly feel bored in order to reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just little students that has reading's heart and soul or real their pastime. They just do what the professor want, like asked to the library. They go to presently there but nothing reading critically. Any students feel that reading through is not important, boring and also can't see colorful pics on there. Yeah, it is to be complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB:

Scientific and Engineering Applications can make you feel more interested to read.
