Young Einstein: And the story of E=mc² (Kindle Single) Robyn Arianrhod

Everyone recognises the famous physicist with the wild, white hair. But what sort of person was the young Albert Einstein, before he became universally acclaimed as the archetypal genius? And how did his genius unfold? In this brilliant new Kindle Single, scientist Robyn Arianrhod blends biography with popular science to tell the story of how young Albert developed a theory that – unknown to him at first – contained the seeds of his extraordinary equation $E = mc^2$.

Arianrhod, who wrote her PhD on Einstein's general theory of relativity, makes the ideas behind the equation accessible to the lay reader, and sets young Einstein's exploration of these ideas against the backdrop of his first loves, his family and marriage, and, above all, his childlike wonder at the nature of the universe. She introduces his heroes and scientific inspirations, and the friends who believed in him when no one else did. In personalising Einstein, she brings to life both the man and his science, in a short, easy-to-read narrative. In showing how he discovered his famous equation, and what it means, she draws a compelling portrait of this prodigious intellect whose unfathomable grasp of the building blocks of physics would change our world forever.

About the Author:

Dr Robyn Arianrhod is the author of two critically acclaimed works of popular science and scientific history: *Einstein's Heroes: Imagining the World Through the Language of Mathematics*, and *Seduced by Logic: Émilie du Châtelet, Mary Somerville and the Newtonian Revolution*. Both were shortlisted for major book awards and are published in the USA. *Einstein's Heroes* was translated into several languages. Robyn was awarded her PhD for research on Einstein's general theory of relativity and has lectured in applied mathematics (including special relativity) for many years. She is currently an Adjunct Research Fellow in the School of Mathematical Sciences at Monash University in Melbourne, where she is undertaking research on the structure of relativistic space-times. She is also a technical reviewer for the American Mathematical Society.

Praise for Robyn Arianrhod's books:

Einstein's Heroes

'Arianrhod's achievement is to so masterfully combine history, biography, and mathematics as to absorb and enlighten even the mathematically maladroit' – Booklist

'An intriguing blend of science, history, and biography . . . Arianrhod's well-written, fascinating discussion of intertwined topics is highly recommended' – Library Journal (starred review)

'A thrilling story . . . Arianrhod brings out the human side of the scientists' – Bloombergnews

'Offers readers an engaging intellectual exercise combining physics, language, mathematics, and biography' – Science News

Seduced by Logic

'Seduced by Logic offers the lay reader an easy and agreeable introduction to the evolution of some crucial scientific debates . . . One cannot help be captivated by her intellectual honesty and enthusiasm' – Times

Higher Education

‘An elegant and inspiring history of how scientific revolutions make their way’ – Edward Dolnick, *The Clockwork Universe*

‘Here is a skillfully written tapestry of the science, history and portrayal of two of the most charismatic women of mathematical science. Robyn Arianrhod has produced a captivating masterpiece’ – Joseph Mazur, author of *Euclid in the Rainforest* and *What’s Luck Got to Do with It?*

From reader reviews:

John Mullen:

What do you concentrate on book? It is just for students since they're still students or the item for all people in the world, what the best subject for that? Simply you can be answered for that question above. Every person has several personality and hobby for every other. Don't to be obligated someone or something that they don't desire do that. You must know how great along with important the book Young Einstein: And the story of $E=mc^2$ (Kindle Single). All type of book could you see on many options. You can look for the internet sources or other social media.

Clyde Harlan:

People live in this new morning of lifestyle always make an effort to and must have the extra time or they will get great deal of stress from both everyday life and work. So , if we ask do people have time, we will say absolutely yes. People is human not really a robot. Then we inquire again, what kind of activity are you experiencing when the spare time coming to you actually of course your answer can unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative with spending your spare time, the particular book you have read will be Young Einstein: And the story of $E=mc^2$ (Kindle Single).

Judith Bryant:

This Young Einstein: And the story of $E=mc^2$ (Kindle Single) is great e-book for you because the content which is full of information for you who also always deal with world and possess to make decision every minute. That book reveal it facts accurately using great organize word or we can say no rambling sentences included. So if you are read that hurriedly you can have whole info in it. Doesn't mean it only provides you with straight forward sentences but challenging core information with wonderful delivering sentences. Having Young Einstein: And the story of $E=mc^2$ (Kindle Single) in your hand like obtaining the world in your arm, info in it is not ridiculous a single. We can say that no reserve that offer you world in ten or fifteen tiny right but this guide already do that. So , this is certainly good reading book. Hi Mr. and Mrs. occupied do you still doubt this?

Scott Bush:

A number of people said that they feel bored stiff when they reading a reserve. They are directly felt the idea when they get a half areas of the book. You can choose typically the book Young Einstein: And the story of $E=mc^2$ (Kindle Single) to make your current reading is interesting. Your own personal skill of reading ability is developing when you similar to reading. Try to choose very simple book to make you enjoy you just read it and mingle the sensation about book and reading through especially. It is to be very first opinion for you to like to available a book and go through it. Beside that the reserve Young Einstein: And the story of $E=mc^2$ (Kindle Single) can to be your new friend when you're truly feel alone and confuse with what must you're doing of this time.
